

NEXT-GEN TECHNOLOGY TRAINING BY

NUTRIMARC Advanced Intelligent Systems

An UNIT Of NUTRIMARC Group

 To know more about the group visit our group website: www.nutrimarc.com

FEATURED PROGRAM SCHEDULE

Artificial Intelligence, Machine Learning, Generative & Agentic AI using Google Cloud Platform

COURSE DURATION

12 Weeks (Live)

START DATE

**Mon, 17th Aug 2026 8
PM IST**

LEARNING FORMAT

Online & Hands-on

BATCH CAP

15 Seats Max

01. COURSE CURRICULUM & MODULE OUTCOMES

Module 1: Foundations – Cloud, Data, Python & statistics

WHAT STUDENT WILL BE TAUGHT:

In this foundational module, we cover foundations required for students to effectively learn and implement AI projects on cloud platforms. students are taught core cloud computing using Google Cloud Platform, Introduce to Core Data and Analytics Services in GCP, Python programming, data manipulation using NumPy and Pandas, essential descriptive and inferential statistics, data visualization, and basic cloud computing workflows.

MODULE OUTCOME:

Students will learn essential Google Cloud Platform services, Python programming, and data manipulation libraries like NumPy and Pandas. Additionally, they will master descriptive and inferential statistics, data visualization, and cloud computing workflows to build a strong technical base for cloud-based AI projects

Module 2: Introduction to AI ML, Predictive AI, ML, Gen AI and Agentic AI

WHAT STUDENT WILL BE TAUGHT:

Era of AI ML to Agentic AI, Differentiate and understand when to use what, Data to AI workflow, Supervised and Unsupervised Learning and its types, ML Project phases, Introduction to BigQuery ML. Foundational models, Classification and Regression models, Clustering K Means, Associations, PCA. Demonstrate ML Projects using BigQuery ML. Introduction to Gemini Multi models. Model Gardens. Vertex AI Studio. How is EDA used in AI ML – Univariate and Bivariate Analysis. Transformers, BERT etc., Data Analysis and Visualization – Histogram, Scatterplot, Heatmap

MODULE OUTCOME:

Students will learn the end-to-end AI and machine learning lifecycle, beginning with exploratory data analysis and visualization before progressing through supervised, unsupervised, and advanced transformer-based models. They will also gain hands-on experience building and deploying predictive and generative AI solutions using enterprise cloud tools like BigQuery ML, Vertex AI Studio, and Gemini multi-modal models.

Module 3: The Core of AI ML –ANN, DNN, End to End AI ML Workflow

WHAT STUDENT WILL BE TAUGHT:

How a machine Learns, Deep dive into ANN's, DNN's, Activation Functions, Loss Function vs Cost Function, Weights and Bias. Deep Learning vs Machine Learning vs Statistics. Deep Dive into ML project, AI Development workflow, AI Development options,

MODULE OUTCOME:

Students will master the end-to-end AI development workflow, navigating training options from AutoML to custom building, while

Model Training - Pre-trained API's, BigQuery ML, AutoML, Custom training. Model Hyper parameters, Model Evaluation, Evaluation Metrics such as Confusion Matrix, PEFT etc., Model generalization and sampling, Model Quality Assessment, Underfitting, Overfitting. TensorFlow, Keras.

optimizing performance using hyperparameter tuning, PEFT, and evaluation metrics like the confusion matrix. Furthermore, learners will diagnose model generalization challenges, effectively managing underfitting, overfitting, and overall quality assessment.

Module 4: The Core of RAG, Generative AI & Agentic AI

WHAT STUDENT WILL BE TAUGHT:

Embeddings ,Vector Databases, Feature Engineering, Prompts and prompt engineering, Grounding and RAGs. Generative AI workflow, Deep dive into Model Gardens – workflow and use cases. Deep Dive into Gen AI , LLM architecture, Google foundation models – PaLM, PAML, IMAGEN, GEMINI, GEMMA, Programming Gen AI Apps , Deep Dive into LangChain, Text Embeddings Deep Dive, Relational Databases for Storing Embeddings . Building RAG solutions, RLHF -Reinforcement Learning through Human Feedback. Model Distillation, Model Optimization. Deploy Generative AI Apps. Agentic AI Architecture, Deployment and Demo. Handling sensitive data.

MODULE OUTCOME:

Students will dive deep into modern Generative AI architectures, mastering vector databases, Retrieval-Augmented Generation (RAG), and Google's foundation models using frameworks like LangChain. They will learn to build, optimize, and deploy intelligent applications—incorporating prompt engineering, RLHF, model distillation, and agentic workflows—while effectively managing sensitive data.

Module 5: MLOps for AI ML, Generative and Agentic AI

WHAT STUDENT WILL BE TAUGHT:

Deep dive into ML Ops, ML pipeline process, ML pipeline phases. MLOps workflow automation. Deep dive into ML, Example ML Pipeline Deep dive. Responsible AI , ML Ops with Agent platform, MLOps for Generative AI

MODULE OUTCOME:

Students will learn to design, automate, and scale end-to-end machine learning pipelines using industry-standard MLOps practices and workflow automation. They will explore real-world pipeline implementations, apply MLOps specifically tailored for Generative AI and agent platforms, and integrate Responsible AI principles to ensure ethical, reliable model deployment.

Module 6: Capstone projects

WHAT STUDENT WILL BE TAUGHT:

Industry case studies covering key areas of AIML, Generative AI, Agentic AI and Google Cloud platform

4 Projects with Live Demo covering Industry case studies

MODULE OUTCOME:

Students will examine real-world industry case studies across machine learning, generative AI, agentic AI, and Google Cloud, bridging theory with practical implementation. They will build and showcase four hands-on projects with live demos, applying cloud and AI solutions to solve authentic business challenges.

⚡ WHY OUR COURSE IS UNIQUE

- Best of the state of the art course curated for you, you will rarely find over the internet
- 1-1 Mentorship, Special sessions, 100% placement assistance

Market Price: ₹2,50,000

Our Special Price:
₹30,000(Inaugural offer)

🔥 **ADDITIONAL EARLY BIRD 10% OFF FOR FIRST 5 ENROLLEES**

- Trained by certified industry expert with over 18 years of experience in IT industry

02. ALUMNI & STUDENT FEEDBACK

"The hands-on cloud labs and focus on real enterprise GenAI architectures helped me transition straight into a production AI role."

— Senior Software Engineer & Course Graduate

"This is the best course in trending technology"

-- Industry Experts
